

Why choose SecurityCEU.com's Compliance Management System (CMS)?

CMS is the ideal solution to track, report on, and automate the certification and license renewal process. Offering an easy-to-use, graphical dashboard for system administrators, everything in the system is one click away.

CMS helps keep companies legal ensuring survivability and eliminates the hassles of scrambling to renew certifications and licenses at the last minute.

Addressable Market

CMS is an ideal solution for security integrators and dealers – anyone that employs technicians. Target clients include small to mid-sized organizations. CMS is ideal for this market due to its feature set and low license price point.

Compelling Economics

CMS is simple to use and administer, yielding considerable and rapid ROI (typically 3-6 months). It works easily into any infrastructure as it is cloud-based and mobile friendly.

It is compatible with SecurityCEU.com training so users can automatically track CEUs. The document manager allows for storing and assigning documents to boost productivity and reduce time for renewals by as much as 80%.

CMS Systems Information

CMS is a cloud-based tool for users and administrators. It is mobile friendly so information can be updated and maintained from the field. The graphical interface is operated from a dashboard offering single-click access to all system features.

Robust System with Low Entry Point

With features comparable to other, much more complicated and time consuming to implement systems, CMS costs only \$0.99/month/user with system implementation fees averaging \$800 per customer. Simple to deploy and maintain, this cloud-based software offers a multitude of benefits to anyone employing technicians.

Implementation Outline

Administrator Dashboard

The main interface to CMS is a graphically driven dashboard offering one-click access to setup, student, and certification data.

Student Management

CMS attaches employees to companies to track their information. Employees can request to join companies and companies can claim employees so they are appropriately attached to companies. This also allows for technicians to move to a new company and take their system information with them.

Import and Export of Data

Administrators can export compliance data and transcript information to Excel. In a convenient CSV format, data can be externally manipulated for additional ad-hoc needs.

Simple Archive and Search

Archive system and user data, uploaded documents, and reports for easy search and storage. Find user and certifications data quickly with multicriteria search including a state license, industry certification, and student location filter to increase productivity and improve data use options.

Easy Document Management

Companies can benefit from increased productivity and streamlined collaboration through the sharing of documents within a centralized location.

The comprehensive feature set offers the management of three document categories. User documents are those related the users such as course certificates of completion.

Primary documents would be those needed to complete the renewal process such as insurance certificates.

Supporting documents would be those applicable to the renewal such as background check forms.

Administrators can lock users' access to these documents so they may not be downloaded or deleted or access can be granted for these options.

Flexible Communication

CMS allows for emails to go out at the 90, 60 and 30 day mark as reminders that renewals are due. Administrators can configure which, if any, emails are sent out. Each of the intervals can be turned on or off independent of each other. Custom messaging for each can also be included.

Easy Reporting

Multiple system reports are available including student CEUs, student certifications, and administrator management. Data can be also be exported to Excel for further manipulation.

Technical Specifications

Use and Functions

- Interface is web-based through browser
- Supported browsers include IE 6.0 or greater, Chrome, Firefox and Safari
- Document Manager uses PDF format files
- Exports to CSV/Excel format
- Minimum memory needed is 32 MB free
- Client interface includes Windows 2000/2003/XP/Vista
- Mobile friendly access on Smartphones and tablets

Search

- Full text and multi-criteria search
- Customized search queries for state license, industry certifications and student location
- Filters are inclusive and consecutively stacked
- Filters can be set and cleared

Workflow

- Web-based configuration interface
- License and certification process creation
- Event triggered email notifications
- Open or controlled (closed) document collaboration

Administration

- Centralized web interface for easy system administration
- Up to three (3) administration accounts by default
- Additional (unlimited) administration accounts available

Web-based Client

- Web-based data composition and management
- Data management from anywhere, any time
- Live view of user data
- Customizable email content and transmission intervals

Document Management

- Flexible Document Manager allows for three (3) document types in storage
- Public folders: documents can be hidden (locked) from user actions by administrator
- Unlimited document life management
- Archive on external storage devices
